

## PAMPHLET BINDERS

### SPINE WRAP PAMPHLET BINDER

Constructed of high density, acrylic-coated gray board and blue poly-cotton c-cloth, the Spine Wrap™ Pamphlet Binder was originated and patented by LBS Archival Products. In the mid-80s as a cooperative effort with preservation librarians and book conservators, this binder, after years of design, development and testing, became the solution to pamphlet binders that caused damage due to installation procedures and binder composition.

The Spine Wrap™ Pamphlet Binder offers durability, efficiency, preservation, an aesthetically pleasing appearance and reversibility. Your pamphlet can be quickly and easily stapled or sewn into the Spine Wrap™ Pamphlet Binder to give it ultimate protection. The pressure-sensitive adhesive strip that is applied across the back of the binder after stitching is complete, conceals and protects the binding structure giving a finished look to the bound document.

### QUICK BIND PAMPHLET BINDER

To create a more affordable yet equally effective binder, we streamlined our Spine Wrap™ Pamphlet Binder. The same select components used in our Spine Wrap™ Pamphlet Binder are used in our Quick Bind™ Pamphlet Binder with the elimination of the spine wrap. If the spine wrap is not needed for your project and you want superior materials, the Quick Bind™ Pamphlet Binder is the solution.

### ARCHIVAL FOLDER

Similar to the Quick Bind Music Binder but constructed of acrylic-coated gray white archival board and Gray CC1 grade cloth is very efficient, attractive cost-effective binder style. The flexible spine accommodates various thicknesses of material. As with all of our pamphlet and music binders, we offer the clear advantage—you may choose a heavy 20 point clear PETG or archival board front for the same price.

### EZ BINDER

The durable, sturdy, affordable, classic style EZ BINDER is used for frequently used materials that need extra protection from daily handling or by first sewing your material into a light weight paper folder and then positioning it into the binder on the moistened gummed cambric. The

durable components of acrylic-coated gray white archival board and gray CC1 grade cloth make a very efficient, attractive binder. If you prefer not to use the stitched remoistenable adhesive cloth strip, specify "regular cambric strip not sewn" when ordering.
